

HUỖNH THANH TÀI

BRIDGE SOFTWARE ENGINEER

HIGHLIGHTS

Bridge Software Engineer with 1+ year of experience in Japanese offshore software development specializing in requirement clarification, bilingual communication, QA coordination, technical translation, and project support between Japanese clients and Vietnamese development teams.

WORK EXPERIENCE

MOR Software JSC

Role: BrSE/QA Engineer Mar 2025 - May 2026

- Analyzed Japanese specifications and clarified ambiguous requirements with Japanese clients and Senior BrSE.
- Managed requirement Q&A and communicated issue details between Japanese stakeholders and Vietnamese development/QA teams.
- Translated business logic, technical specifications, and QA findings into clear explanations for offshore team members.
- Supported Japanese PM in project progress tracking, issue management, release verification, and coordination across Development, Staging, and Production environments.
- Designed and executed test cases, prepared Japanese test evidence, and participated in requirement clarification meetings to validate deliverables before release.
- Verified backend data and batch processing results using DynamoDB, CloudWatch, and database checks.

System-EXE Co., Ltd (Onsite)

IT Communicator/QA Engineer support May 2025 - Aug 2025

- Worked onsite with Japanese stakeholders to gather requirements, clarify technical issues, and facilitate communication between Japanese customers and Vietnamese offshore teams.
- Analyzed Japanese specifications, Q&A documents, tickets, and test cases to support Vietnamese development teams.
- Translated technical documents between Japanese and Vietnamese for .NET and Java/Spring Batch projects.
- Supported HORENSO-style reporting, issue tracking, manual testing, and Japanese test evidence creation.
- Helped the team understand V-Model development process, batch processing concepts, and customer-side expectations.

FPT University

Role: Team Leader, Mobile Developer Jan 2022 - May 2022

- Led a 4-member team and coordinated task assignment and timeline.
- Developed Android mobile app with React Native and supported frontend API integration.
- Coordinated between backend and frontend members in a microservices-based system.
